

## Investment Objective

Outperform the annual risk-adjusted return of Dash in USD dollars, and be legal owner of Dash DAO assets.

## Rebalance Review Frequency

Dynamic based on the event of Dash surpassing 50% or going below 10% of the portfolio allocation

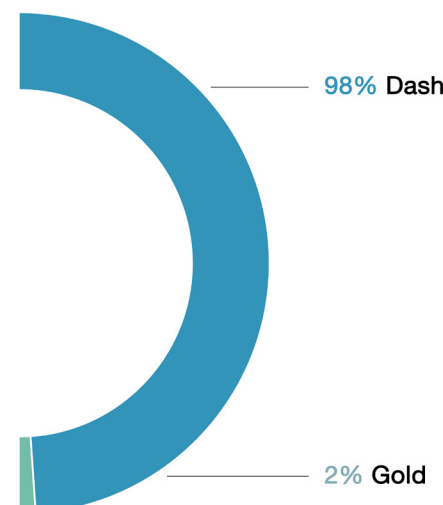

## Benchmark Composite

Dash's risk adjusted return measured by Sharpe Ratio and Maximum Drawdown

Assets Under Management	\$276,184
Number of Holdings	2
Registration	Cayman Foundation
Trailing 30-Day Return	-11%
YTD Annualized Vol	114.64%
YTD Sharpe Ratio	0.55
Trailing 30-Day Maximum Drawdown	-21.5%
Year to Date Return	63.8%

## The Dash Investment Foundation Outperformed Dash in June 2020.

The Dash Investment Foundation successfully purchased gold, began staking Dash and set-up a bank account. As of June 30th, 2020, the foundation is invested in Dash and gold. Since gold went up 3.68% in June, the portfolio outperformed Dash. The DIF also collected 5.2 Dash in staking rewards.

The DIF centers their private equity valuations on the Private Market Values (PMV) for each prospective company. The DIF PMV is the price a strategic acquirer is willing to pay for the entire enterprise. This approach involves looking at a business as a function of its assets and earnings power. We examine a business as if we were a competitor looking to acquire the company by asking how much the company's product or service would cost to replicate.

The objective is to discover large differences between our estimate of PMV and the price in the general market and invest in the superior asset for returns. We also take into consideration macroeconomic variables that may lead to the overvaluation of private equity shares. DIF investment grade firms can thrive in an expansionary period and survive a recession. Prospective companies are further categorized as near term or long term, depending on their expected time frame to realize returns.
